SUMMARY

Industrial Engineer with 4.5+ years across **process engineering**, **continuous improvement**, and **operations management** in distribution and manufacturing. Six Sigma Green Belt certified, with hands-on ownership of **critical process parameters**, **root cause analysis**, and **quality control systems**. Experienced applying **PFMEA**, control plans, Lean tools, and constraint analysis to real production problems. Delivered an estimated **$3M** in savings and led a **$120K** greenfield plant project from concept through startup. Completing an MS in Industrial Engineering in December 2026.

EDUCATION

Master of Science in Industrial Engineering — **Dec 2026**
Northeastern University, Boston — 3.62 GPA

Bachelor of Engineering in Mechanical Engineering — **Jul 2020**
Savitribai Phule Pune University, India — 3.3 GPA

SKILLS

Process & Quality: PFMEA, Control Plans, Root Cause Analysis, Process Capability, IQ/OQ/PQ, Calibration
Lean & CI: Six Sigma Green Belt, Value Stream Mapping, 5S, SMED, Kaizen, Standard Work, Takt Time
Design & Analysis: SolidWorks, Facility Layout, Tooling Design, Capacity Modeling, Time Study
Data & Systems: Power BI, SQL, Python, Advanced Excel, WMS (Manhattan Active, PKMS)

PROFESSIONAL EXPERIENCE

Supply Chain - Industrial Engineer Intern: Staples Inc, Framingham, MA — **Jan 2026 – Sep 2026**

- Analyzed network capacity as the sole on-site engineer, proposing a facility solution that delivered an estimated **$3M** in savings
- Traced a fleet-wide stoppage across 1,000+ **AGVs** to a single time-server dependency, deploying a validated redundancy fix
- Resolved recurring pipeline failures on an automated system, preventing faults that carried **$100K per day** in exposure
- Recalibrated replenishment thresholds through time study and flow analysis, cutting restocking trips by **30%** across the site
- Redesigned layout at a regional facility to support an aisle expansion, unlocking space for **40+ additional pallet positions**
- Authored the runbook and work instructions that let the support team operate and troubleshoot the system independently
- Built **Power BI** dashboards for network reporting, migrating more than 650 reports and correcting 400+ for data integrity
- Supported a new **3PL** client site launch, personally onboarding more than 50,000 individual SKUs on-site

Industrial Engineer: AB Enterprises, India — **Dec 2021 – Aug 2024**

- Owned process parameters across a 10-tank **anodizing line**, setting rectifier output at 13 to 17 V and 1600 to 1700 A per load
- Verified coating thickness by **DFT meter** and bath chemistry by hydrometer, holding calibration intervals on all instruments
- Identified anodizing as the line **constraint**, showing throughput fell from 29 loads per shift at 12 microns to 12 at 20 microns
- Raised daily output from 700 kg to **1 ton per 8-hour shift** through a greenfield plant build, reaching 2 tons on extended hours
- Designed **tooling and fixtures** in SolidWorks, raising batch capacity **40%** and cutting unit cost **18%** per section
- Resolved a customer escape on-site, recovering the full payment and tracing both defects to a single anodizing root cause
- Oversaw production scheduling and raw material planning for an aluminium **extrusion plant** running 4 to 5 tons per day
- Reduced unplanned downtime **25%** through preventive maintenance and wrote the safety standard adopted on the floor
- Tracked rejection rates across both plants, holding anodizing at 2 to 3 percent and extrusion at 4 to 5 percent

Industrial Engineer Intern: TechnoTrak Engineers, India — **Nov 2020 – Nov 2021**

- Conducted detailed time studies on machining and assembly workflows to identify recurring process bottlenecks on the floor
- Reconciled inventory cycle counts against system records across the stores, reducing stock discrepancies by **10%** overall

PROJECTS

Process Risk Analysis, Aluminium Anodizing Line

- Documented a 10-tank process by **PFMEA**, scoring 8 failure modes and revising ratings against actual rejection records
- Built a linked 14-characteristic **control plan**, tracing each measurement and reaction plan to its originating failure mode
- Found the two highest-ranked risks were undetectable with existing controls despite passing thickness and visual inspection

ISO 9001 Gap Analysis, Manufacturing Operation

- Assessed a job shop against clauses 4 to 10, finding conformance in calibration, nonconformity control and production control
- Identified gaps in documented scope, audit independence and management review structure against clause requirements
