SUMMARY

Manufacturing and industrial engineer with hands-on experience owning **process parameters** on a production line, conducting **time studies** and capacity analysis across distribution operations, and leading **capital projects** from concept through commissioning. Six Sigma Green Belt certified, with a record of **root cause analysis**, **PFMEA** and control plan development, and building the reporting that operations teams rely on. Completing an MS in Industrial Engineering in December 2026.

EDUCATION

Master of Science in Industrial Engineering **Dec 2026**
Northeastern University, Boston 3.62 GPA

Bachelor of Engineering in Mechanical Engineering **Jul 2020**
Savitribai Phule Pune University, India 3.3 GPA

SKILLS

Process Engineering: Process Parameters, Time Studies, Capacity Analysis, Root Cause Analysis, IQ/OQ/PQ, SOPs, Layout
Quality & Methods: Six Sigma Green Belt, Lean, Kaizen, 5S, SMED, PFMEA, Control Plans, SPC, ISO 9001, CAPA, 5-Why
Data & Systems: Power BI, SQL, Python, Advanced Excel, Minitab, WMS (Manhattan Active, PKMS), Microsoft Office, Kafka
Design & Projects: SolidWorks, AutoCAD, Tooling and Fixture Design, Capital Projects, Supplier Qualification, Commissioning

PROFESSIONAL EXPERIENCE

Supply Chain - Industrial Engineer Intern: Staples Inc, Framingham, MA **Jan 2026 – Sep 2026**

- Supported an automated fulfilment operation as the sole on-site engineer across an entire multi-site distribution network
- Conducted **time studies** across live distribution operations, recalibrating thresholds and cutting restocking trips **30%**
- Deployed a fleet-wide equipment update across more than 250 AGVs, scaling from single-unit validation to the full fleet
- Executed that rollout during overnight maintenance windows, then monitored the whole fleet through the next production day
- Completed the validated deployment at two separate fulfilment centers, isolating and updating units over SSH on the floor
- Built **Power BI** reporting for site leadership, migrating more than 650 individual reports across four separate platforms
- Audited and corrected more than 400 individual reports to restore full accuracy across all operational performance data
- Redesigned the facility layout and material flow for an aisle expansion, unlocking 40+ additional pallet positions on site
- Proposed a design alternative on a storage system installation that reduced the projected floor levelling requirement significantly
- Analysed inbound, outbound and inventory operations to identify where the material flow constrained daily throughput
- Worked directly in **WMS** platforms including Manhattan Active and PKMS, auditing transaction accuracy across the site
- Supported a new client site launch, personally onboarding more than 50,000 individual SKUs into the main warehouse system
- Authored standard work documentation and the detailed runbook production teams relied on through every single shift
- Trained operators and supervisors directly on every new process and reporting tool introduced across the whole facility
- Presented findings and recommendations to senior site leadership, refining each proposal from their direct floor feedback
- Collaborated across the operations, quality, engineering and technology functions on all shared operational objectives

Manufacturing Engineer: AB Enterprises, India **Dec 2021 – Aug 2024**

- Owned **process parameters** across a 10-tank anodizing line, controlling rectifier output, bath chemistry and bath temperature
- Managed a **$120K** capital project from initial concept through startup, commissioning 6+ machines across six months
- Raised daily output from 700 kg to a full ton per 8-hour shift through a greenfield plant build and facility layout design
- Designed **tooling and fixtures** in SolidWorks for multi-section part processing, raising overall batch capacity **40%** per load
- Led **root cause analysis** on recurring process defects, cutting rework by **10%** and unplanned downtime by **25%** overall
- Cut unit cost **18%** and inventory holding cost by 30% through process redesign and material planning improvements
- Validated all new equipment and tooling through complete **IQ**/**OQ**/**PQ** qualification before any release into full production
- Resolved a customer quality escape at their own facility, recovering both the full payment and the commercial relationship
- Cross-trained more than 24 associates on processes and standards, confirming proficiency before any formal sign-off
- Qualified more than 3 suppliers against technical specifications, negotiating terms and holding 95%+ on-time delivery

PROJECTS

Process Risk and Quality System Analysis

- Documented a 10-tank process by **PFMEA**, scoring 8 failure modes and revising occurrence ratings against rejection records
- Built a linked 14-characteristic **control plan** defining measurement method, frequency and reaction plan per characteristic
