SUMMARY

Industrial engineer with eight months in Staples' automated fulfillment centers and nearly three years on an aluminum anodizing line in India, cutting unplanned downtime 25% and rework 10%. Comfortable tracing a robot fault, building a production schedule or writing the SQL behind a report. Completing an MS in Industrial Engineering in December 2026.

EDUCATION

Master of Science in Industrial Engineering **Dec 2026**
Northeastern University, Boston 3.62 GPA

Bachelor of Engineering in Mechanical Engineering **Jul 2020**
Savitribai Phule Pune University, India 3.3 GPA

SKILLS

Industrial Engineering: Time Study, Standard Times, Routings, Line Balancing, Value Stream Mapping, Layout, Throughput
Quality & Improvement: Root Cause Analysis, 5-Why, Fishbone, PFMEA, Control Plans, SPC, IQ/OQ/PQ, DMAIC, Lean, Six Sigma
Operations & Equipment: Production Scheduling, Inventory Planning, Safety Stock, Replenishment, Preventive Maintenance
Systems & Automation: SQL Server, Snowflake, Power BI, Excel, Minitab, PKMS, AGV Fleets, Goods-to-Person, Vision Systems, Kafka

PROFESSIONAL EXPERIENCE

Supply Chain - Industrial Engineer Intern: Staples Inc, Framingham, MA **Jan 2026 – Sep 2026**

- Recalibrated breakpack tote min/max levels in Fridley FC's goods-to-person ladder to real demand, cutting replenishment trips **30%**
- Standardized the case-load sequencing on Fridley's replenishment pallets, saving about **2 minutes** on each pallet handled
- Served as the only on-site engineer for the Fridley ladder stabilization, tracing faults from bot to vision system in Kafka and Redis
- Wrote the Fridley ladder runbook, setting out each recurring failure type and the steps the support team takes to clear it
- Remapped the Charlotte AGV layout for an aisle expansion so 200+ robots used the new pick locations, freeing room for **40+ pallets**
- Tested each new pick location in the PKMS/WS400 QA environment, then confirmed it with test picks before the change went live
- Rolled out a time-server fix to the Ontario and Denver AGV fleets over SSH, one robot, then three, then the rest, in 1 to 4am windows
- Migrated **650+** Power BI reports off a SQL Server being decommissioned, rebuilding **400+** of the database views they ran on
- Wrote those views in **SQL** over OPENQUERY, pulling from PostgreSQL, MySQL, DB2, Snowflake and Teradata linked servers
- Redesigned a fulfillment center Power BI report around a single KPI home page, cutting the navigation time across its **15+** pages
- Onboarded a third-party client's Nashville warehouse of **50,000+** SKUs, cube scanning, slotting and loading the item data into PKMS
- Configured AGV path layouts, stop points and route distances in Guozi Robotics' fleet software, which govern how the robots travel
- Proposed a floor-leveling alternative for a ladder site that would have cut a **$4M** quote to about **$1M**, before the project was canceled

Manufacturing Engineer: AB Enterprises, India **Dec 2021 – Aug 2024**

- Specified multi-section jigs for 3-meter aluminum profiles and oversaw the build, adding **40%** load capacity and cutting unit cost **18%**
- Cut unplanned downtime **25%** through preventive maintenance built with the maintenance crew and fast breakdown response
- Cut rework **10%** by tracing coating defects to root cause, checking bath chemistry by hydrometer and coating thickness by DFT meter
- Cut raw material holding cost **30%** by setting reorder points, safety stock and lead times by hand, without running short
- Built production schedules around customer orders, processing times, run sizes and changeovers, delivering **95%+** of orders on time
- Inspected a rejected 2-ton Tata Marcopolo order at their site, found defects in **5%** of it, reworked them and recovered **100%** of payment
- Stopped a caustic tank cleaning procedure being done without proper PPE and replaced it with a written safety SOP and PPE checklist
- Delivered a rush **3 to 4 ton** priority order inside a **5-day** deadline by moving the anodizing line onto a two-shift staffing plan

PROJECTS

New Plant Setup and Capacity Expansion - AB Enterprises

- Set up a second powder coating and anodizing plant in about six months for **$120K**, buying and installing **6** new machines
- Specified two sulfuric tanks in parallel to break the micron-build bottleneck, lifting the site from **700kg to 1,700kg** a day
- Hired and trained **24+** people to run the plant and validated each machine through IQ, OQ and PQ before it went into production

Process FMEA and Control Plan - Anodizing Process

- Built a PFMEA scoring **8** failure modes across the anodizing process and the **14**-characteristic control plan that follows from it

JARVIS and Job Application Tracker (Python, JavaScript, Next.js, TypeScript, SQLite)

- Built a personal job search tool that watches six ATS platforms by API and ranks postings on a sponsorship index of **34,039** DOL filings
- Kept work authorization and legal questions out of the automation with a hard stop written into the code, not a prompt
